

PANIC ROOM DOOR

PINGAN panic room doors are high security doors that provide reliable resistance against burglary. The highly efficient design combines ultra-strength built and light weight for optimum resistance to both mechanical and fire attacks while keeping the door easy to use.

BOLT WORK

6 x 32 mm diameter nickel chrome cylindrical bolts (3 bolts left and right), each fitted under strong rebates integrated into the door frame when locked.

LOCKING

Several high-security locking mechanisms:

- Combination locks
- Key locks
- OTC locks

ULTRA HIGH STRENGTH BUILT

105 mm door thickness with a 9 mm ultra high strength stainless steel plate strongly welded to increase burglary and fire resistance.

RELOCK MECHANISM

Locks are protected by a relocker mechanism that forms part of the integrated bolt work when triggered.

ADDITIONAL FEATURES :

Customisation : Size and thickness can be tailor made according to customers specific needs

Optimised weight: Design provides a light weight structure while keeping a high security construction

OPTIONS :
